Reviews about the drug Disaverox

Doctors who prescribe antiviral drugs to patients respond positively to the drug Disaverox, noting its high clinical efficacy in relation to viral strains. Patients already a few weeks after the regular intake of Disaverox feel a significant improvement in their condition: in many cases, it is possible to achieve a stable remission.

Two active active components of the drug Disaverox - zidovudine and lamivudine, inhibit the development of the virus in the human body. We are talking about viral strains of both the first and second types. Disaverox is a reverse transcriptase inhibitor that leads to the intracellular disintegration of pathologically active particles of the virus and destroys its DNA.

Description of the drug Disaverox

The release form of the drug Disaverox is film-coated tablets. One package can contain from 60 to 100 tablets. The preparation is accompanied by detailed instructions for use. It is permissible to use it only after the appointment of the attending physician, before meals, in the dosage established by the specialist.
