Description

Basic information about the drug OlanibDescription OlanibOrder, delivery and payment «Olanib (?????????)»?

Where to buy Olanib

Olanib, which contains olaparib, is indicated for patients with cancer of the ovaries, breast, fallopian tubes, and other internal organs. The tablets are used after unsuccessful chemotherapy courses or unsatisfactory surgery. Olanib from the Bangladeshi pharmaceutical company Everest pharma can be purchased at the Pharmacy at a bargain price.

Olanib price

The pharmacy operates on the basis of a license to sell medicines, which gives the right to conclude contracts with manufacturers and suppliers directly. As a result, Olanib's pricing is affordable and does not include postage and customs fees. In addition, direct deliveries from Bangladesh,

from the warehouses of the manufacturer "Everest pharma", ensure the high quality of the medicine.

Reviews of the drug Olanib

Clinical studies of the active substance of Olanib tablets - olaparib, have shown that the tablets successfully block the growth of tumors and prevent mutations. In addition, the drug triggers the body's anti-tumor immunity. The drug is produced according to a fairly new formula, which provides a small number of side effects, in addition, patients who took Olanib note a positive trend in the course of treatment. According to research data, Olanib completely destroys cancerous tumors in more than a third of cases.

Description of the drug Olanib (Olaparib)

Olanib tablets in the form of a cone-shaped white capsule contain 50 mg of the active substance olaparib, which acts on cancer cells, blocking their reproduction. The remains of the drug are excreted by the kidneys and intestines.

Olanib indications and uses

Olanib is used as a monopreparation in the treatment of malignant neoplasms in the ovarian area. Oncologists usually prescribe a daily pill containing a dose of olaparib. Exceptions are debilitated patients, patients with problems in the liver, cardiovascular system, pancreas or musculoskeletal system. In each case, the dosage can be reduced.

Contraindications

Olanib tablets are not used for the treatment of children and adolescents due to their effect on the body's hormonal system. Among the contraindications is also individual intolerance to olaparib or other components of the drug. In case of muscle weakness, heart problems or seizures, you must stop taking the drug and immediately contact your oncologist.
